13'000 donors

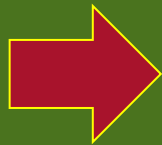

Recent activities or projects that are linked to SAVE:

The Federal Office for Agriculture is currently revising the Animal Breeding Ordinance.

Unfortunately, we have noticed that less emphasis is being placed on conservation itself and that more breeding measures and breeding progress are being demanded of endangered breeds.

A joint statement by SAVE on the importance of sheer conservation and what is important for maintaining genetic diversity, would be helpful for us at present.

Recent activities or projects that are linked to SAVE:

We are caught between breeding associations, which tend to be against the wolf, and donors, who are mostly in favour of it.

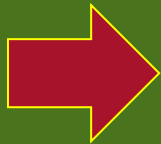

The joint statement by SAVE, which takes this dilemma into account, helps us in our argumentation.

Recent activities or projects that are linked to SAVE:

Implementing conservation projects for chicken breeds poses challenges because many people want to keep old breeds but are not motivated to join breeding associations and herd books.

We would welcome exchanges with other organisations and the compilation of best practices within the SAVE network.

The SAVE Annual Meeting

We generally value exchanges between like-minded organisations. These exchanges also serve to share experiences and expertise and to coordinate cross-border activities.

We look forward to the upcoming SAVE meetings.

A photograph of three sheep standing in a grassy field. The sheep on the left is light brown with a silver bell. The sheep in the middle is dark brown. The sheep on the right is light brown with a red tag and a bell. Each sheep has a thought bubble above it. The background is a dark, hilly landscape.

I think he's now at the
end of his presentation

really?

Now he could
say thank you.
